

What about deer – sprays and repellents?

Store bought (or home – made) deer repellents have their place in some landscapes,

Major problem with these types:

Sprays, soaps, predator urines, hair, etc.

The deer are very resilient, they get use to the smell, of certain repellents and then completely ignore after a couple weeks.

Having to re – apply after heavy rains.

Our recommendation to clients is to use some type of deer netting if you have a heavily traveled / popular deer property.
